Response to Amendment

Drawings

1. The drawing filed on 2/28/2006 is accepted by the Examiner.
1. Based on applicant's amendment and telephone interview filed on January 6, 2009, with respect to 1-41, have been fully considered and are persuasive, upon further consideration, the 35 USC 101 rejection and rejection of prior art of record for claims 1-41, are hereby withdrawn.
2. The claims 1-41 now are allowed.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicants Attorney (Mr. Barry E. Sammons, Reg No. 25,608), January 6, 2009, without traverse.

The amended claims 14 and 15 as follows:

Claim 14. (Currently Amended) claim 14, line 1, delete -- claims 12 or 13 --, after phrase "The method in", and line 1, insert -- claim 12 -- after phrase "The method in".

Claim 15. (Currently Amended) claim 15, line 1, delete -- claims 12 or 13 --, after phrase "The method in", and line 1, insert -- claim 12 -- after phrase "The method in".

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to tomography, and more particularly, to methods and apparatus for creating pixel images from projections.

with respect to claim 1 representative of claims 19 and 30, the closest prior art of record (Brandt et al), reference is directed to computerized tomography scanning, and in particular, to an improved method and apparatus for scanning a subject and constructing a visual image from the sensed tomography data, but does not teach or suggest, among other things, "a) producing intermediate-images from selected projections; (b) performing digital image coordinate transformations on selected intermediate-images, the parameters of coordinate transformations being chosen to account for view-angles of the projections from which the intermediate images have been produced, and for the Fourier characteristics of the intermediate-images; (c) aggregating subsets of the transformed intermediate-images produced in step (19) to produce aggregate intermediate-images; and (d) repeating steps (b), and (c) in a recursive manner until all of the projections and intermediate images have been processed and aggregated to form the pixel image, wherein the coordinate transformation parameters are chosen so that the aggregates of the intermediate-images may be represented with desirable accuracy by sparse samples".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Brandt) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
